SUMMARY

Software engineer on two production teams: full-time at Clinica Joelle, building and running a live clinic site on custom WordPress themes, and part-time at CSDS, Cairo University, where I built the Next.js/TypeScript CMS behind the university's AI assistant and helped build and test its Arabic RAG pipeline. Comfortable end to end - responsive UIs, authentication and access control, database security rules, and LLM integration. Computer Science & AI student at Cairo University; DEPI Web Development scholarship graduate.

PROFESSIONAL EXPERIENCE

Software Engineer - Clinica Joelle

2026 – Present

New Cairo, Egypt (Full-time)

- Build and run the clinic's live site, [clinicajoelleegypt.com](#), as two custom WordPress themes written from scratch - PHP templates and template parts, block patterns, theme.json tokens and self-hosted fonts.
- Shipped treatment pages, doctor profiles, before-and-after result galleries and a consultation enquiry flow.
- Own front-end performance, responsive layout and cross-browser parity on the live site.

Software Engineer - CSDS, Cairo University

2026 – Present

Cairo, Egypt (Part-time)

- Built the university's Q&A CMS in Next.js 16 and TypeScript, used by 27 faculties to author the content behind its AI assistant.
- Designed its auth chain: bcrypt PIN login, signed cookies exchanged for scoped Firebase tokens, with Firestore rules as the boundary.
- Helped build the Arabic RAG pipeline behind the assistant - LangChain over per-faculty ChromaDB stores, multilingual MPNet embeddings, Arabic normalisation and reranking - and was its tester, checking retrieval quality and answer grounding across 27 knowledge bases.
- Added fail-closed Upstash Redis rate limiting, shipped the interface in Arabic (RTL), and worked on the Java JSP chat portal.

AI Expert - Scale AI

02/2026 – 05/2026

Remote

- Benchmarked 500+ generative AI video outputs, establishing accuracy baselines across multi-modal models.
- Delivered high-volume transcriptions at 98%+ sustained accuracy for language-model training datasets.

EDUCATION

Bachelor of Computer Science and Artificial Intelligence - Cairo University

10/2023 – Expected 07/2027

Giza | GPA: 3.12

- Relevant Coursework: Data Structures & Algorithms, OOP, Web Development, Operating Systems, Concurrent Systems.

Digital Egypt Pioneers Initiative (DEPI) Scholarship - MCIT

01/2026 – 06/2026

Cairo, Egypt (Remote/Hybrid)

- Competitive MCIT scholarship in advanced Web Development: React.js, component-driven design and modern front-end architecture.

SKILLS

Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, responsive and RTL/Arabic UI

Backend & Databases: Node.js, Express.js, PHP, Firebase (Firestore, Authentication, Security Rules), Upstash Redis, bcrypt, REST APIs

AI & Retrieval: RAG pipelines (LangChain, ChromaDB), multilingual embeddings, reranking, prompt engineering, LLM API integration (Groq), model testing & evaluation

Core & Tools: Java, Python, Data Structures & Algorithms, OOP, Git, GitHub, Vercel, WordPress theme development, Vite, Claude Code

PROJECTS

PortfolioGenie - DEPI Graduation Project (Team) (GitHub)

05/2026 – 06/2026

- Collaborated in a team to build an AI-powered developer-portfolio generator using React.js and component-driven architecture.
- Implemented dynamic routing and reusable UI components to render personalized portfolio pages from user input.

Hospital WhatsApp Bot (GitHub) (Live on WhatsApp - demo on request)

06/2026

- Built a WhatsApp bot with Node.js/Express letting patients book medications and doctor appointments conversationally.
- Integrated the Groq AI API (text & vision) and AWS Textract to read prescriptions and insurance cards; Firebase for storage.

Firebase Social Media App (GitHub) (Live Demo)

06/2026

- Developed a full social media web app using React, TypeScript, and Vite with Firebase (Firestore & Authentication) as the backend.
- Implemented user authentication, a real-time posts feed, and profile management with a type-safe component architecture.

Movie Viewer Application (GitHub) (Live Demo)

04/2026 – 05/2026

- Built a full-stack app with a team using PHP/Laravel and async JavaScript for database CRUD.
- Implemented text-escaping utility functions to sanitize dynamic data inputs and eliminate Cross-Site Scripting (XSS) risks.
