

Belal Alaa El-Shabrawy

Junior Full-Stack Developer

eng.belalalaa@gmail.com | 01023353747 | Giza, Haram
[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full-stack-leaning Computer Science student who has shipped four web applications in recent months using React, TypeScript, Firebase, and Node.js, including two live, deployed projects and an AI-integrated WhatsApp bot. Comfortable working end-to-end: building responsive UIs, wiring up backends and databases, and integrating third-party and AI APIs. Completed the competitive DEPI Web Development scholarship with hands-on React.js and component-driven architecture training. Seeking a Software Engineering role to bring fast execution and full-stack curiosity to a production team.

PROFESSIONAL EXPERIENCE

AI Expert - Scale AI

02/2026 – 05/2026

Remote

- Conducted detailed video-quality comparisons for 500+ generative AI outputs, establishing precise accuracy benchmarks across multi-modal models.
- Performed high-volume text transcriptions with a sustained 98%+ accuracy rating to optimize specialized dataset alignment for language model training pipelines.

EDUCATION

Bachelor of Computer Science and Artificial Intelligence - Cairo University

10/2023 – Expected 07/2027

Giza | GPA: 3.12

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Web Development, Operating Systems, Concurrent Systems.

Digital Egypt Pioneers Initiative (DEPI) Scholarship - MCIT

01/2026 – 06/2026

Cairo, Egypt (Remote/Hybrid)

- Completed a competitive MCIT scholarship program specializing in advanced Web Development, with intensive training in React.js, component-driven design, and modern front-end architecture.

SKILLS

Web Development: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, React Router, React Hooks, Responsive Web Design

Backend & Databases: Node.js, Express.js, Firebase (Firestore, Authentication), REST API Integration

Core Engineering & Languages: Java, Data Structures & Algorithms (Skip Lists, Red-Black Trees), Object-Oriented Programming (OOP)

Tools, Platforms & AI: Git, GitHub, Vite, Claude Code, AI API Integration (Grok)

PROJECTS

PortfolioGenie - DEPI Graduation Project (Team) (GitHub)

05/2026 – 06/2026

- Collaborated in a team to build an AI-powered developer-portfolio generator using React.js and component-driven architecture.
- Implemented dynamic routing and reusable UI components to render personalized portfolio pages from user input.
- Applied prompt-engineering techniques to integrate AI-generated content into the portfolio-building workflow.

Hospital WhatsApp Bot (GitHub) (Live on WhatsApp - demo on request)

06/2026

- Built an automated WhatsApp bot with Node.js/Express enabling patients to book medications and doctor appointments through conversational flows.
- Integrated the Groq AI API (text & vision models) to read and extract data from uploaded prescriptions and insurance cards.
- Used Firebase for real-time data storage and AWS Textract for document and image text extraction.

Firebase Social Media App (GitHub) (Live Demo)

06/2026

- Developed a full social media web app using React, TypeScript, and Vite with Firebase (Firestore & Authentication) as the backend.
- Implemented user authentication, a real-time posts feed, and profile management with a type-safe component architecture.
- Built a responsive, mobile-first UI with clean client-side state management.

Movie Viewer Application (GitHub) (Live Demo)

04/2026 – 05/2026

- Built a full-stack app with a team using PHP/Laravel and JavaScript (async/await) to handle seamless asynchronous database CRUD actions.
- Integrated external RESTful media APIs to ingest, parse, and render dynamic movie feeds based on client-side search queries.
- Implemented text-escaping utility functions to sanitize dynamic data inputs and eliminate Cross-Site Scripting (XSS) risks.
- Designed a responsive, mobile-first frontend layout using clean CSS architecture to ensure cross-browser styling parity.
